Product Overview

Dr. Data is an app with a simple interface which is easy to use. It provides a user-friendly interface to maintain patient records, and billing information so that the task of managing patient records can be made digital and hassle-free.

Why choose us?

Most of the existing solutions provide a web based service where the user requires an internet connection to use the service. So what if the user does not have access to internet? What should the user do then? This question will not arise in case of our service as we provide the facility to store the data locally when there is no internet connectivity so that a doctor can look after the patient without worrying about the connectivity.

Details

Unlike existing solutions, Dr. Data is targeted towards catering the record management needs of small clinics. So, this app will primarily be used by doctors themselves.

Features

- A login facility for enabling only authorized access to the system.
- Each patient will be identified with his/her patient id.
- There will be an option to choose whether the patient is a new patient or an existing one.
- If the patient is existing, then the records of that patient will be displayed.
- There will be a feature to sync the data stored locally to the online database.
